

Now you can have the fashionable, versatile look of stucco with remarkable ease, affordability, durability, and some of the best warranties in the industry.

StuccoChoice Panels

Stronger, Simpler Stucco

With its clean, sophisticated look, stucco has become one of the most fashionable finishes available today. Now you can have easy-to-install stucco wall systems that are architecturally beautiful, structurally warranted and affordable.

>> Attractive and Lightweight

These non-insulated stucco wall panels are produced using modern, precise manufacturing processes, thus assuring an attractive, consistent finish field-applied products can't deliver. And at a savings they can't deliver, either.

In addition, because they are surprisingly lightweight — 1.84 pounds per square foot — the panels are ideal for any number of construction and renovation projects.

>> Trouble-Free Installation

A patented system ensures easy, fast installation. What's more, the panels can be installed in any climate, during any time of the year, and do not require a weather barrier. They can also be installed on virtually any type of structure, including wood, concrete or metal.

>> Durable and Maintenance-Free

Panels are manufactured using the latest in roll forming and paint application technologies. Coatings are made from a carefully formulated acrylic and marble crush, resulting in an attractive, consistent and sturdy exterior that eliminates water absorption, frost damage, cracking, chipping and peeling. They are also fire and impact resistant, and can be painted. Most importantly, however, is the fact that comprehensive independent testing has shown these textured wall panels meet universal building codes and consistently demonstrate long-term cosmetic stability in the corrosive atmospheric conditions found in urban and coastal areas.

>> Fast, Cost-Efficient Construction

For starters, our stucco wall panel systems are initially less expensive than most field-applied products. Then, shipping and handling costs are reduced thanks to the product's light weight.

>> Industry Leading Warranty

While most field-applied stucco products offer a maximum five-year warranty on surface materials only, our StuccoChoice wall panels are backed by an industry-leading 20-year warranty.

- Panels available up to 25' long
- 16" wide panels
- 20 gauge single skin
- Non-insulated
- 20-year warranty
- Available in 24 colors

Ideal for many applications including:

- Office buildings
- Retail facilities
- Metal building systems
- Manufacturing facilities
- Religious buildings
