

High Reach 2 Headquarters & Warehouse

LOCATION
Tulsa, OK

SIZE
17,920 sf

ROOF SYSTEM
RoofLOK

Located in Sanford, Florida this 41,400 sq ft facility is the new corporate headquarters for High Reach, a family owned, aerial lift equipment rental company, servicing customers throughout Florida.

Construction of the building consisted of partial height concrete tilt wall panels and KirbyRib2 wall panels coupled with a 24 ga. KirbyLok mechanically seamed roof system. The 120' wide clearspan single slope design allows for maximum flexibility in the warehouse area including ingress/ egress thru a pair of KBS engineered 20' x 20' bi-parting bottom rolling doors. Identical, open canopies with handmade open web trusses by KBS provide cover for the overhead doors and highlight the front wall of the warehouse. A covered, partially sheeted end bay allows for an equipment wash down area.

Exterior wall areas of the office were upgraded with parapet conditions, sheathing and EIFS over KBS wall panels and an outset arched front entry. Featuring a soaring 22' ceiling and dual semi-circular staircases, the impressive front foyer boasts a radius entry leading into a 6,000 sq ft Kirby mezzanine system.
