

University of Alabama at Birmingham Football Facility

LOCATION
Birmingham, AL

SIZE
81,000 sf

ROOF SYSTEM
Standing Seam 360

The University of Alabama at Birmingham (UAB) Football facility consists of an 81,000+ sq ft building that is 206' wide, 394' long and 46' tall at the sidewalls. The building is an open-air concept pavilion building, which covers an entire football field. The project has a large conventionally built training-office building next to it, which overlooks the playing surface. The building is located just off one of the major interstates in Birmingham, AL and is a very impressive structure for the skyline of the area.

By working closely with Kirby Authorized Builder, M.J. Harris, the team was able to incorporate innovative engineering ideas to develop an ideal solution for the project using a pre-engineered Kirby building. At completion, this high-profile project for UAB was a remarkable success resulting from a strong partnership to ensure the project stayed on track and under budget.
