**LOCATION**  
Corydon, IN

**SIZE**  
62,000 sf

**ROOF SYSTEM**  
Standing Seam

**WALL SYSTEM**  
Kirby Wall with masonry

Rock Creek Community Academy is an Indiana charter school with a mission to offer a distinctive education choice that provides rigorous standards of academic excellence in a small, safe, nurturing environment in partner relationships with parents and community both in and out of the classroom, and instills and develops character, servant leadership, and a desire for lifelong learning.

This custom, 62,000 sf single story pre-engineered facility incorporates a main building, elementary, middle, and high school buildings, as well as a gym. The structures were built with a rigid frame clear span pre-engineered metal building system, as well as a lean-to structure for the main building. The exterior is a combination of masonry and Kirby Wall panels with a Kirby standing seam roof system. The interiors of the buildings are lined with Kirby Rib II wall panels. Additional support was incorporated to support the six, 1500 lb basketball goals in the gym.
