ShakeoutPro® app easy to add to your project in eQuote

ShakeoutPro® is an innovative staging and shakeout app that saves you money, time, and effort by using a 3D model to illustrate the parts of a building and where they belong on the jobsite. With this app, your fully realized project fits in the palm of your hand on a smartphone or tablet. By scanning the barcode on any part, bundle or crate the app will digitally identify the appropriate parts and highlight them within the 3D model right on your screen.

ShakeoutPro is designed to help Builders and Erectors save time, but you may not be familiar with how to request that this service be added to your project in eQuote.

Requesting ShakeoutPro in eQuote

You can request ShakeoutPro for many projects in eQuote. They need to be Standard projects and not EZ projects, which are processed differently. You can find the button for ShakeoutPro right next to “Calculate Price” near the top of your eQuote screen.

1. Press the button, which should be yellow if ShakeoutPro is available. If the button is red, the project is not available for ShakeoutPro. You can select the button and it will give an explanation for several scenarios which make the project ineligible.
2. Select the radio button option to add ShakeoutPro to your project.
3. On the pop up form, you can read the information listed, or click the link to access more information about ShakeoutPro on our website.

☒ Yes, please add ShakeoutPro™ services for this project (\$575 upcharge)
☐ I do not want ShakeoutPro™ for this project
[Click here for ShakeoutPro benefits and features.](#)

ShakeoutPro™ is a unique mobile app specifically developed to help Builders and Erectors save time unloading and staging steel at the jobsite. It uses a 3D model to illustrate where parts belong on a building and is compatible with both Apple and Android devices. There is no additional special equipment or software required to purchase. Your project data is accessed from the cloud and ShakeoutPro™ uses technology that is already available on today's smart phones and tablets. By simply scanning the barcode on any part, bundle or crate, the app will digitally identify the appropriate parts and highlight them within the 3D model. This app can eliminate stacks of 2D plans cluttering your desk and jobsite. Now, your fully-realized project fits right in the palm of your hand.

Once you have successfully added the ShakeoutPro service to your project, you will see a full page in the proposal to let you know it's been included.
