

Project Spotlight

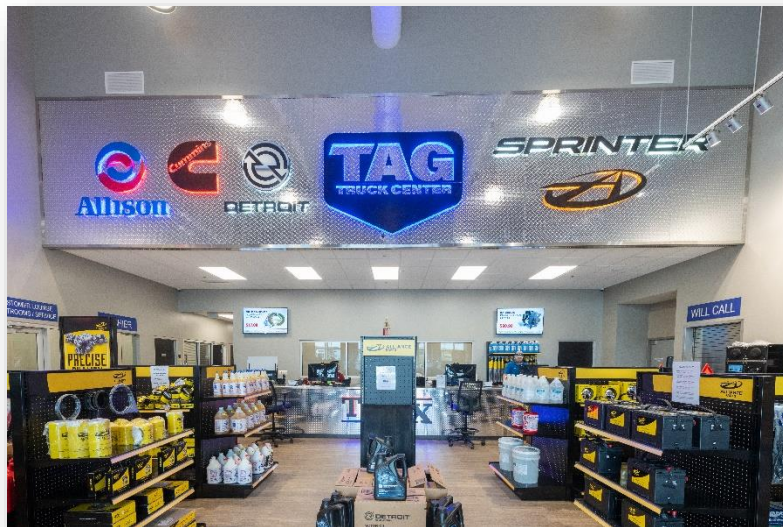

SEPTEMBER 2020

TAG Truck Center

Builder: Chris Woods Construction Co., Inc.

TAG Truck Center's newest facility, located in Tupelo, MS, sits on 18 acres. The 57,000 square foot facility includes three express services and diagnostic bays, 19 service bays with overhead cranes, and a truck wash bay.

The building, completed in May of 2020 after 9 months of construction, also features sales and business offices, conference room, break and locker rooms for employees, a retail parts showroom, a parts warehouse with a mezzanine, and a trucker's lounge.

The truck center was built with a single slope design, and a symmetrical gable design in the shop area. Framing was mostly a rigid frame clear span. Kirby's Standing Seam 360 roof system, as well as insulated metal wall panels and the Kirby Rib II wall system were utilized. This Tupelo location is the second completed project for the team of TAG Truck Centers, Chris Woods Construction, and Fitzgerald and Associates Architects.
