BUILDING END-USE

Indoor football practice facility

Located at the University of Memphis, in Memphis, TN, this custom pre-engineered metal building was the ideal solution for the new indoor football practice facility. The structure is a 200' x 400' clear span building that provides 43' eave height and 58' clear ridge height, and connects to an existing brick structure. The full-length football field and storage space includes floating goal posts and mechanical nets in each end zone, LED lighting with 100' candle performance-level lighting, two video platforms, a south end zone scoreboard and Tiger-striped end zones with a leaping Tiger logo at midfield on NFL-level Vertez Prime Field Turf. The facility also includes large roll up doors on the east and west sidelines.
