LOCATION

Ball Ground, GA

SIZE

15,000 sf

ROOF SYSTEM

Roof-Lok Plus
Dark Bronze

BUILDING END-USE

Worship and Fellowship Hall

This house of worship and fellowship hall for the Macedonia Baptist Church congregation was created utilizing four custom pre-engineered metal building structures, totaling 15,000 square feet. Each structure, was created in a gable symmetrical design and with clear spans. Kirby supplied the spandrel beams for the brick wall exterior. Kirby also provided the roof beams in the vestibule structure to support the steeple. Challenges that were overcome include the multiple width steps, the steeple support, and overhangs with flat soffit.
