## LOCATION

Knoxville, TN

## SIZE

27,552 sf

## WALL SYSTEM

Kirby Wall  
Slate Gray

## ROOF SYSTEM

Roof-Lok Vertical Rib Standing Seam  
Dark Bronze

## BUILDING END-USE

Community Church

In need of additional space for their growing congregation, The Church at Sterchi Hills chose a pre-engineered Kirby building to suit their needs.

Located in Knoxville, TN, the project involved a 27,552 sf addition to an existing structure in order to provide ample room to continue serving the expanding community. The project consisted of a 750 seat sanctuary with an attached Pre-K through 6th grade classroom wing featuring Kirby Wall panels. The classroom wing is comprised of five individual buildings, two of which required a hip/valley roof design.

The new and existing buildings are separated by an interior courtyard coming off of the new multipurpose gathering space. The stunning new covered entrance clad with Kirby Roof-Lok Vertical Rib Standing Seam panels features architecturally pleasing exposed wood beams with an outdoor seating area that opens to a large café with a coffee bar to serve as additional meeting and fellowship space.
