Reflective White

BUILDING END-USE

Commercial Hangar

Located at the prestigious Peachtree Dekalb Airport (PDK) Atlantic Airport, this single slope commercial hangar is 12,000 sf in size with a 3,000 sf attached office. An expansion to a duplicate building built a few years prior - it includes approximately 800 sf of ground service support. The freedom of design offered in a metal building made it easy to accommodate the 108'x30' Norco sliding hangar door, which includes translucent panel inserts for natural lighting. More light is allowed into the building through the translucent panels along the sidewalls of this hangar. The office building is partially lined with liner panel, and a wrap-around fascia with overhang.
