BUILDING END-USE

Water Treatment

St. Marys Water Treatment Plant is a 16,328 sf custom Kirby pre-engineered building with several symmetrical gable and lean-to buildings tied-in with high-low conditions. The exterior consists of 2' eave extensions on all the walls and entry canopies. Full height brick is used on one of the buildings and partial height brick with Kirby Reversed Roll Panel siding accents the other building. A 42' by 55' top running crane is featured in the interior.
