NBG Offers New CICIP Classes

As the industry's best Builders, we understand your commitment to providing quality service. To prepare our Builders to install our products as properly and efficiently as possible, Nucor Buildings Group has recently created the new Contractor Installation Certification Program (CICIP). The CICIP is a two-and-a-half-day program recommended for erectors and supervisors who oversee roof installations. After an individual successfully completes the program, they will be equipped with the required information, skills and competency to supervise onsite installation of KBS products.

CICIP classes begin this spring and will take place at the new CICIP Laboratory in Waterloo, IN. In addition to hands-on assembly of full-scale roofs, with opportunities to install trapezoidal and vertical standing seam roof systems, roof-to-wall interfaces, ridge assemblies, and more, tours of both the Nucor Buildings Systems manufacturing plant and the Nucor Insulated Panel Group facilities at the Waterloo campus are included.

Visit our [website](#) for more information about the CICIP Program and to register for an upcoming session.

Upcoming CICIP Session
June 7-9, 2023 **Session Full**
***New Sessions Opening Soon**

CICIP completion provides qualification for our new industry-leading warranty program. KBS has recently announced a streamlined [Weathertightness Warranty Program](#). In addition to our Standard Weathertightness Warranty, we will now be also offering a **Standard No Dollar Limit** and **Premium No Dollar Limit Weathertightness Warranty**.

To qualify for both No Dollar Limit Weathertightness Warranties, the Builder is required to have representatives who will be supervising roof installations successfully complete the CICIP.
