

# Integrated Packing Machinery

## LOCATION

Grand Rapids, MI

## SIZE

26,102 sf

## WALL SYSTEM

Reverse R-Panel

## ROOF SYSTEM

Standing Seam 360

Galvalume

## BUILDING END-USE

Conveyor System Manufacturing

This conveyor system manufacturing facility needed more production and office space. The project is an addition to an existing Nucor building and adds 18,000 sf of manufacturing space and 7,500 sf of office space to the original structure. A full mezzanine lies above the office space, with future expansion in mind. Existing window locations, roof elevations, and tie-ins were coordinated to ensure harmony between the added structure and the original. A 5-ton crane is featured on the existing crane rail, made to travel seamlessly into the addition.
