

December 2023

Register for 2024 CICP Training (SS360 Roof System)

Our Contractor Installation Certification Program (CICP) is a two-and-a-half-day program including the essential components of providing quality installation, hands-on assembly of full-scale roofs, how to properly monitor a crew during production installation, and installation practice that replicates the real-world conditions of new metal roof construction. You will have opportunities to install trapezoidal and vertical standing seam roof systems, roof-to-wall interfaces, ridge assemblies, panel end laps, trim lines, gutters and more. Plus, you'll have the chance to examine special products and conditions like those seen on job sites.

CICP was created to help prepare you and your company to install our products as properly and efficiently as possible. After successfully completing the program, you'll be equipped with the required information, skills, and competency to supervise onsite installation of American products. And you'll qualify for our industry-leading warranty program, including our standard and premium, no-dollar-limit, weathertightness warranties.

Visit our [website](#) for more information about the CICP Program and to register for an upcoming session.

Upcoming CICP Schedule

February 14-16, 2024
April 10-12, 2024
