Standing Seam 360
Galvalume Plus

BUILDING END-USE

Heavy Equipment Warehouse
& Showroom

The Linder Machinery project is a purpose-built facility serving one of the region's premier heavy equipment dealers. Designed to accommodate the demanding operational needs of large-scale equipment sales and service, this structure delivers the clear-span space, structural capacity, and professional curb appeal that a market-leading dealership requires.

The building's gable symmetrical framing provides an interior that supports two 10-ton overhead cranes, extensive roll-up door access along both sidewalls, and a dedicated wash bay at the rear, complete with ceiling and wall liners and partition walls. Kirby's R-Panel wall cladding in Reflective White keeps the building bright and heat-reflective in the Florida climate, while a Standing Seam 360 roof in Galvalume delivers lasting weather resistance and a clean architectural profile. Perhaps the most striking design element is the inset front end wall, engineered specifically to showcase bold signage and integrated lighting.
